## La perfusione ipotermica

**Dott. Riccardo De Carlis**

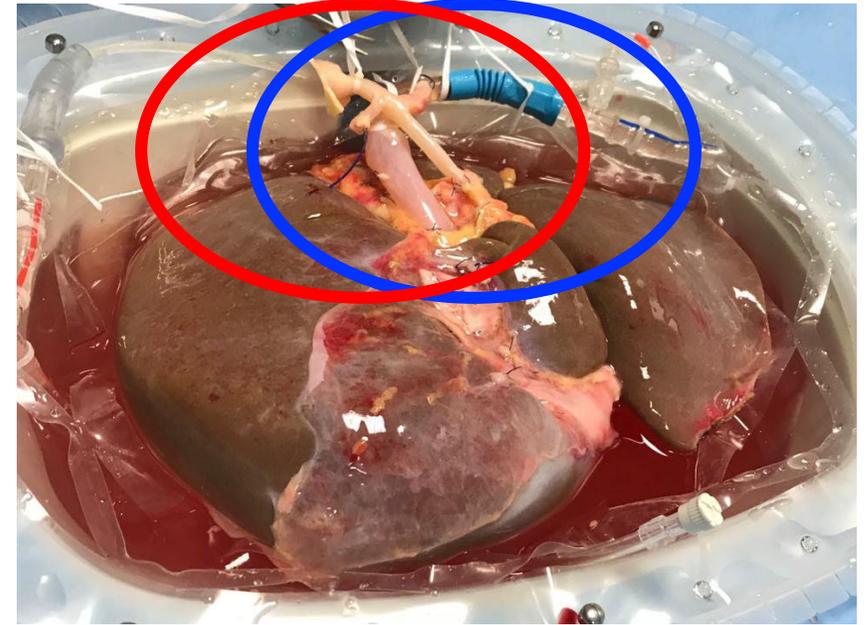

ASST GOM Niguarda – Milano

## PROTOCOLLO D-HOPE

- Belzer® solution for MP\*
- $t = 10^{\circ}\text{C}$
- $p\text{O}_2 = 60 \text{ kPa}$
- $P (\text{v. porta}) = 4 \text{ mmHg}$  (Q continuo)
- $P (\text{a. epatica}) = 25 \text{ mmHg}$  (60 bpm)

Groningen

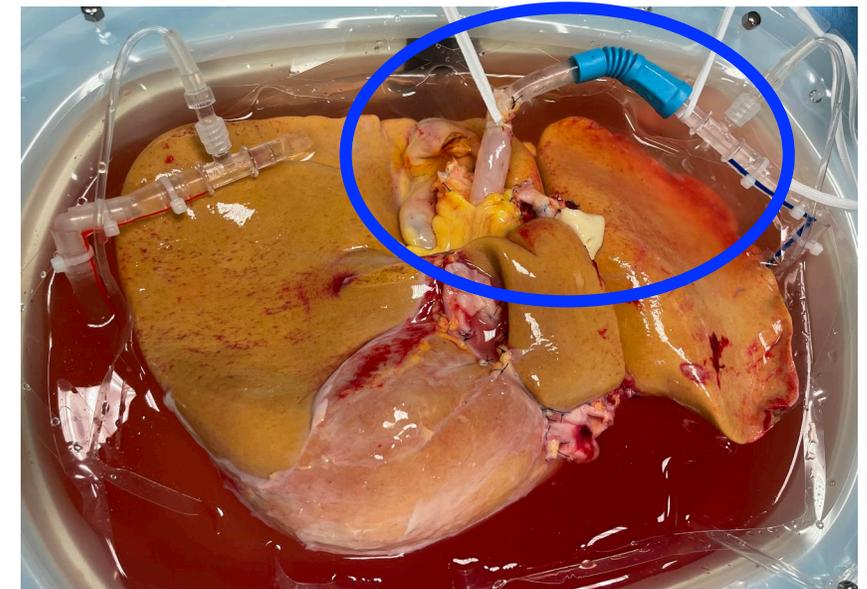

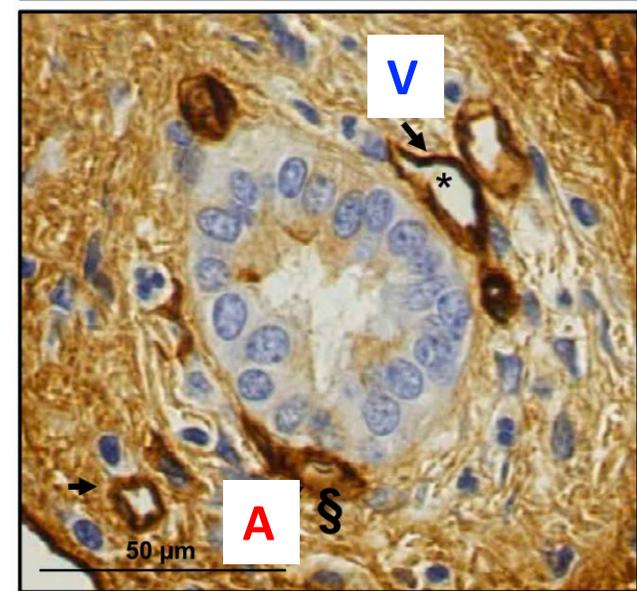

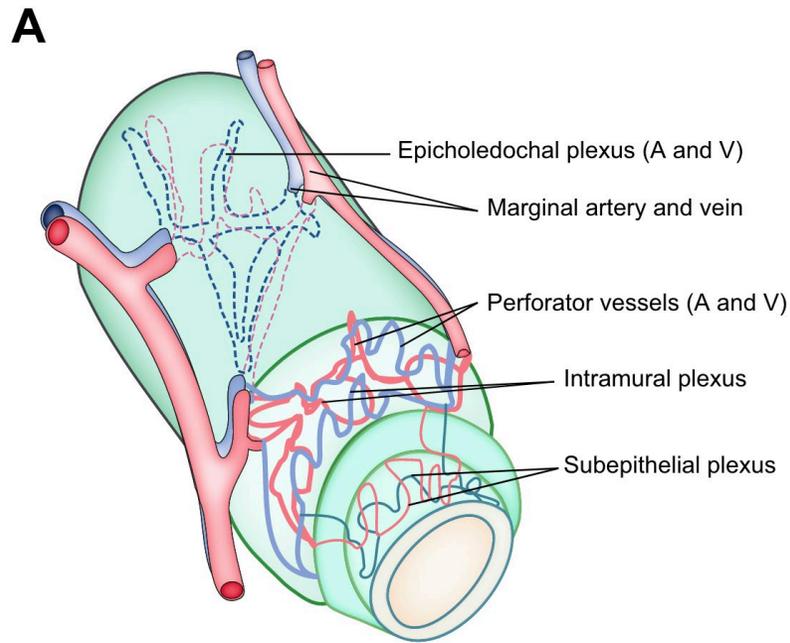

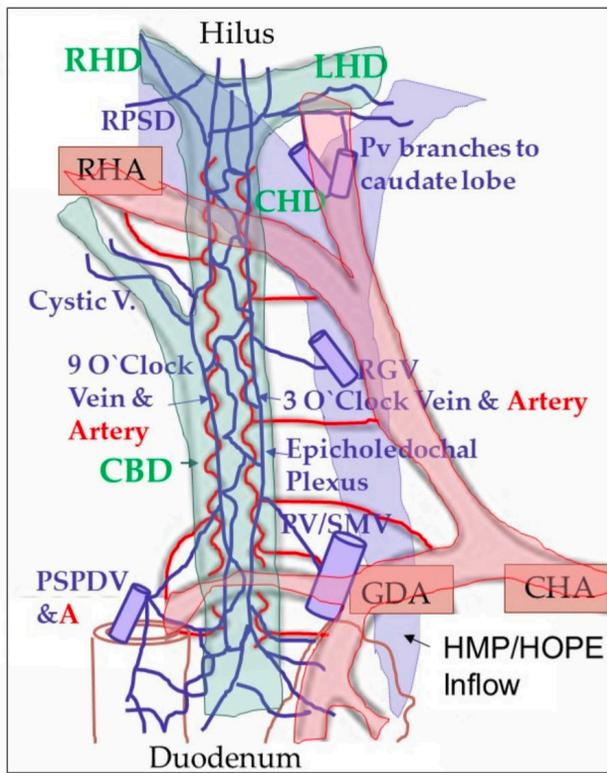

## PROTOCOLLO HOPE

- Perfusione esclusivamente portale
- $T = 8\text{--}12^{\circ}\text{C}$
- $p\text{O}_2 = 70\text{--}110 \text{ kPa}$
- $P (\text{v. porta}) = 3 \text{ mmHg}$
- Q continuo, 150-300 mL/min

## Hypothermic Machine Perfusion in Liver Transplantation — A Randomized Trial

R. van Rijn, I.J. Schurink, Y. de Vries, A.P. van den Berg, M. Cortes Cerisuelo, S. Darwish Murad, J.I. Erdmann, N. Gilbo, R.J. de Haas, N. Heaton, B. van Hoek, V.A.L. Huurman, I. Jochmans, O.B. van Leeuwen, V.E. de Meijer, D. Monbaliu, W.G. Polak, J.J.G. Slangen, R.I. Troisi, A. Vanlander, J. de Jonge, and R.J. Porte, for the DHOPE-DCD Trial Investigators\*

## Hypothermic Oxygenated Machine Perfusion Reduces Early Allograft Injury and Improves Post-transplant Outcomes in Extended Criteria Donation Liver Transplantation From Donation After Brain Death

Results From a Multicenter Randomized Controlled Trial (HOPE ECD-DBD)

Czigany, Zoltan MD, PhD\*; Pratschke, Johann MD†; Froněk, Jiří MD‡; Guba, Markus MD§; Schöning,

Annals of Surgery: November 2021 - Volume 274 - Issue 5 - p 705-712

doi: 10.1097/SLA.00000000000005110

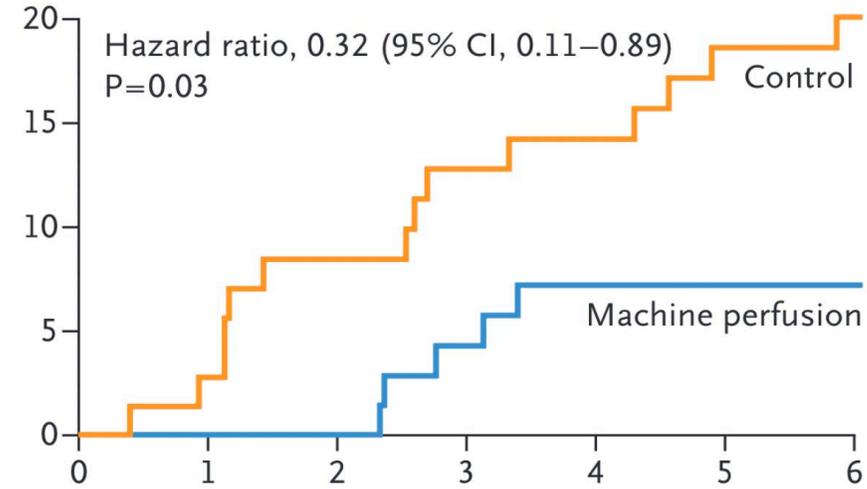

Figure 1. Cumulative Incidence of Symptomatic Nonanastomotic Biliary Strictures.

### Serum peak ALT

418 (IQR: 221–828) vs 796 (IQR: 477–1195) IU/L,  $P = 0.030$

### 90-day complications

44% vs 74% CD grade  $\geq 3$ ,  $P = 0.036$

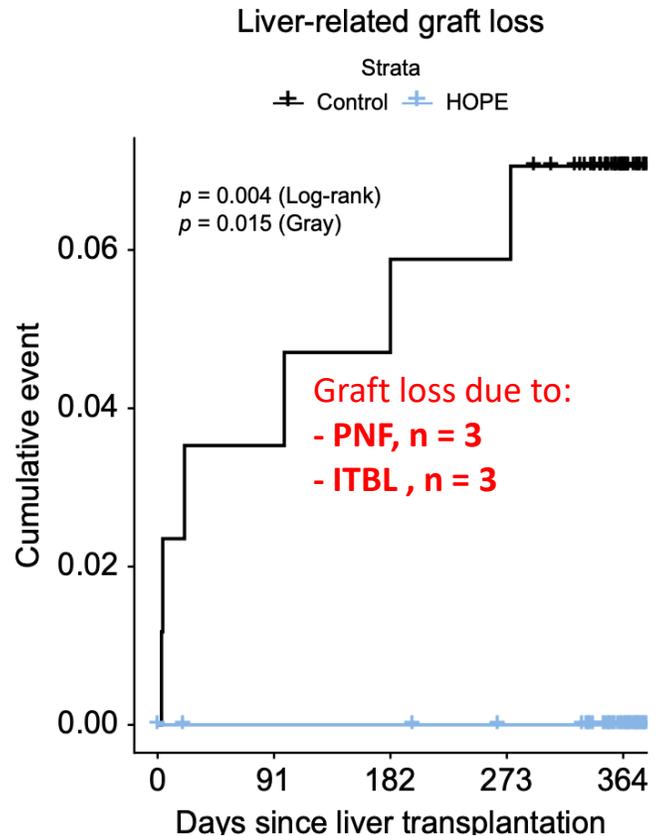

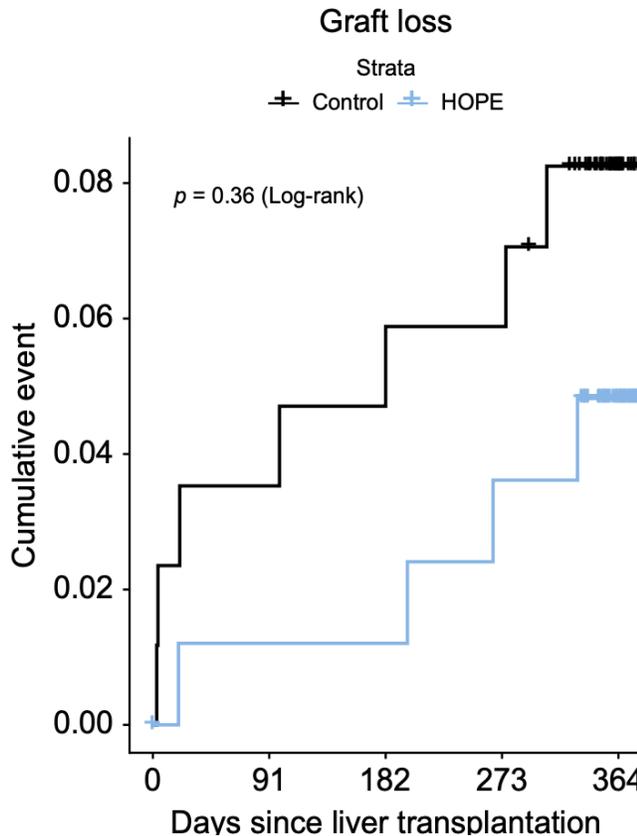

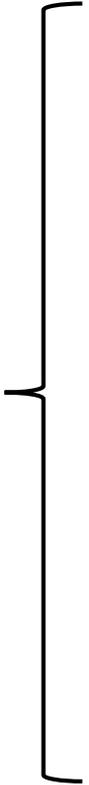

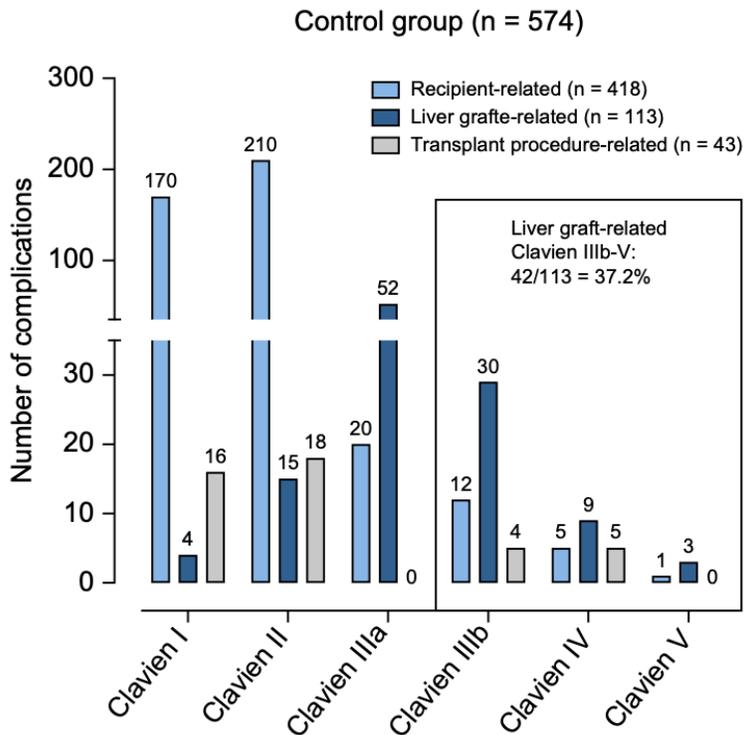

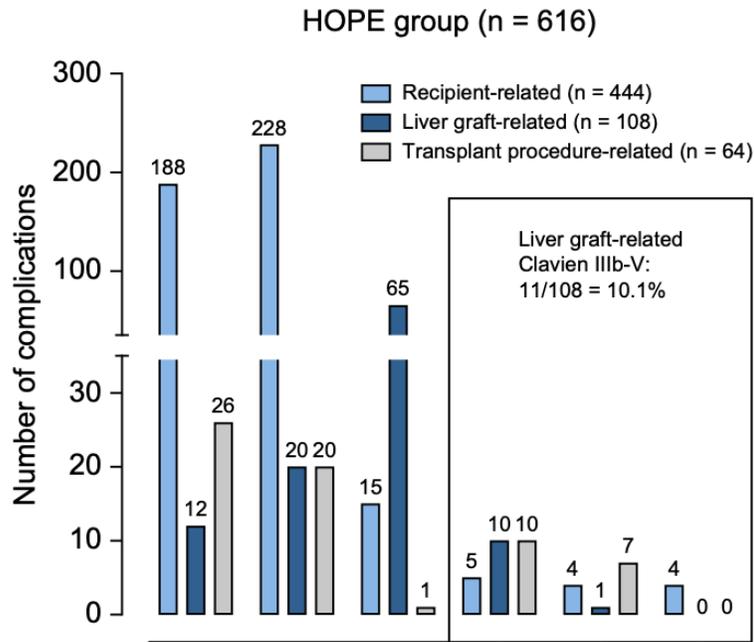

32 (IQR: 12–56) vs 52 (IQR: 35–98) CCI,  $P = 0.021$

### Hospital-stay

20 (IQR: 16–27) vs 36 (IQR: 23–62) days,  $P = 0.002$

# Current practice of normothermic regional perfusion and machine perfusion in donation after circulatory death liver transplants in Italy

[Riccardo De Carlis](#) , [Andrea Lauterio](#), [Leonardo Centonze](#), [Vincenzo Buscemi](#), [Andrea Schlegel](#), [Paolo Muesan](#), [Luciano De Carlis](#) & [Italian DCD Collaborator Group](#)

[Updates in Surgery](#) (2022) | [Cite this article](#)

## Italian national survey (all adult liver transplant centers)

-  20 min stand-off  21/21 (100%) answers
-   19/21 (90.5%) ECMO available
-  11/21 (52.4%) NRP program for cDCD

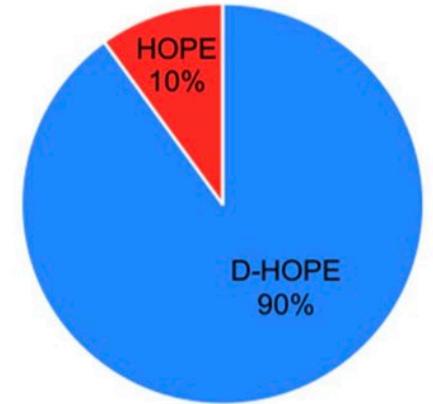

## Sequential MP 11/11 (100%) NRP → SCS → end-ischemic MP

 8/11 (72.7%) Hypothermic MP

 1/11 (9.1%) Normothermic MP

 2/11 (18.2%) Both types depending on the case

What protocol do you use? [hypothermic MP]

Do you have the possibility to measure FMN? [hypothermic MP]

# Conclusioni

- Due protocolli sovrapponibili: DHOPE/HOPE
- Prolungamento della preservazione (non dell'ischemia fredda!)
- Vantaggio sulla colangiopatia ischemica nei fegati da DCD
- Selezione? L'FMN è il solo parametro che correla con la sopravvivenza d'organo. Ma manca ancora di una validazione esterna.

Grazie dell'attenzione!
